

Bushy Hill  
Junior School

## Progression in Division Calculations

# Structures for Division (Haylock and Cockburn 2008)

Children should experience problems with the different division structures in a range of practical and relevant contexts e.g. money and measurement

## Equal-sharing

Sharing equally between  
How many (much) each?

6 shared equally by 2

$$6 \div 2$$

## Inverse of multiplication (Grouping)

So many lots (sets/groups) of so many  
Share equally in to groups of ...

$$18 \div 3$$

18 divided into  
equal groups of 3s

Divide twelve into equal  
groups of four

Make 12

Overlay  
groups of  
four

= 3

## Ratio structure

comparison

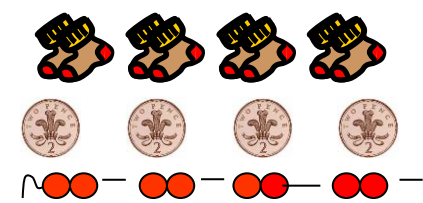

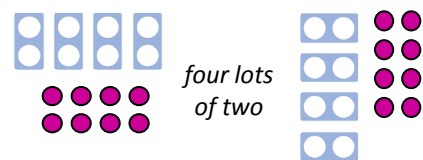

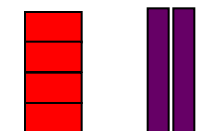

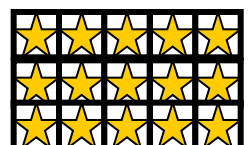

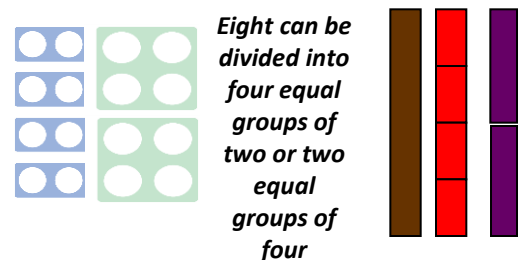

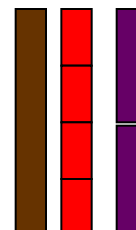

inverse of scaling structure of multiplication  
scale factor (decrease)

Barney earns three times more than Fred. If  
Barney earns £900 how much does Fred earn?

Jo's journey to school is three times as  
long as Ella's. If Jo walks to school in  
30 minutes how long does it take Ella?

# Division

Pupils develop the concept of multiplication and division and are enabled to use these operations flexibly.  
Multiplication and division should be taught together.

End of Year Expectations	Possible concrete and visual representation	Teacher Modelling/Children's Recording	Fluency
<p><b>Year 1</b></p> <p>Solve single step practical problems involving division</p> <p>Use concrete objects, pictorial representations</p> <p>Understand division as grouping and sharing</p> <p>Use the language of 'sharing equally between'</p>	<p><i>counting in groups of twos</i></p>  <p><i>straw bundles</i></p>   <p><i>Numicon and counter arrays</i></p>  <p><i>Cuisenaire</i></p> <p><i>four lots of two</i>      <i>two lots of four</i></p>  <p><i>doubling</i></p>  <p><i>flexible array</i></p>  <p><i>bar models</i></p> 	<p>Practical only e.g. link to small world</p> <p>Using concrete objects, pictorial representations and arrays with the support of an adult – take photographs/draw pictures – if using Numicon small icons could be stuck in</p>  <p><i>Eight can be divided into four equal groups of two or two equal groups of four</i></p>	<p>Count in twos, fives and tens from different multiples</p> <p>e.g. 6, 8, 10, 12 etc</p> <p>Emphasise patterns</p> <p>Find simple fractions eg half and quarter, of objects, numbers and quantities</p>
<p><b>Year 2</b></p> <p>Solve single step practical problems involving division</p> <p>Use concrete objects, pictorial representations</p> <p>Understand division as grouping</p> <p>Find halves and then quarters</p> <p>Work with a range of materials and contexts in which multiplication and division relate to grouping and sharing discrete quantities and to arrays</p>	<p><i>Record as number sentences using ÷ and =</i></p> <p><math>8 \div 4</math></p> <p>Eight divided into four equal groups = two in each group</p>  <p><math>8 \div 4 = 2</math></p>  <p><i>Eight can be divided into four equal groups of two or two equal groups of four</i></p>	<p>Count back in twos, threes, fives from zero and tens from any number</p> <p>e.g. 12, 10, 8, 6 etc</p> <p>Emphasise patterns</p> <p>Connect ten times table to place value and five times table to divisions on a clock face</p> <p>Introduction to multiplication tables. Practise to become fluent in division facts for 2, 5 and 10</p> <p>Solve division problems involving grouping and sharing</p>	

# Division - multiplication and division should be taught together– refer to structures of division

## End of Year Expectations

## Possible concrete and visual representation

## Teacher Modelling/Children's Recording

## Fluency

### Year 3

- Develop a reliable written method for division
- Solve problems involving missing numbers
- Solve problems including those that involve scaling
- Recognise, find and name  $\frac{1}{2}$  and  $\frac{1}{4}$  of an object, shape or quantity
- Understand the link between unit fractions and division
- Connect  $1/10$  to division by 10
- Count in tenths

Cuisenaire to represent scaling

Statue is 3 metres

I am 3 times smaller

arrays

$$88 \div 4$$

bar models

Children should use manipulatives alongside algorithms

Repeated subtraction - chunking

Ensure children see/understand the link between grouping on a number line and vertical recording for chunking

$$95 \div 5 = 19$$

$$\begin{array}{r} 95 \\ - 50 \quad (\underline{10} \times 5) \\ \hline 45 \\ - 25 \quad (\underline{5} \times 5) \\ \hline 20 \\ - 20 \quad (\underline{4} \times 5) \\ \hline 0 \end{array}$$

**Fact Box**

$2 \times 5 = 10$

$5 \times 5 = 25$

$10 \times 5 = 50$

$$321 \div 3$$

Short division- no remainders

$$560 \div 4$$

$$\begin{array}{r} \div \quad 1 \ 4 \ 0 \\ \hline 4 \ 3 \ 6 \ 0 \end{array}$$

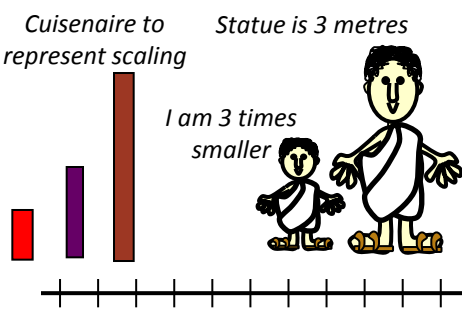

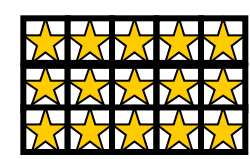

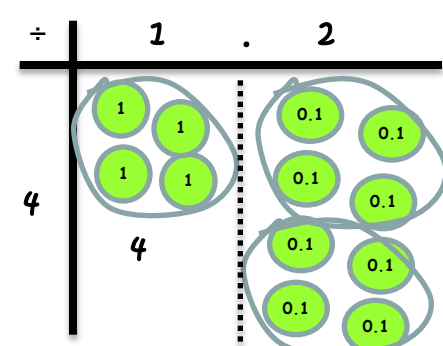

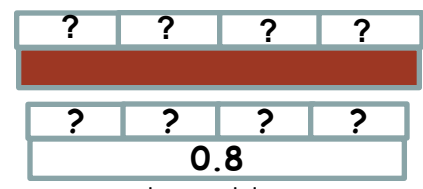

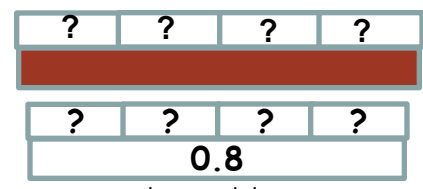

- Recall and use related division facts for the 3, 4 and 8x tables (Continue to practise other tables)
- Write and calculate mathematical statements for division using what is known
- Use division facts to derive related division facts e.g. using  $6 \div 3 = 2$  to work out  $60 \div 3 = 20$

### Year 4

- Become fluent in the formal written method of short division with exact answers when dividing by a one-digit number
- Divide one- or two-digit numbers by 10 or 100, identifying value of digits as tenths or hundredths
- Solve two-step problems in different contexts, choosing the appropriate operation, working with increasingly harder numbers including correspondence questions e.g. three cakes shared equally between 10 children

- Continue to practise recalling division facts for multiplication tables up to  $12 \times 12$
- Practise mental methods and extend this to three-digit numbers for example  $200 \times 3 = 600$  into  $600 \div 3 = 200$
- Use place value, known and derived facts to divide mentally, including dividing by 1
- Recognise and use factor pairs and commutativity in mental calculations

# Division - multiplication and division should be taught together– refer to structures of division

End of Year Expectations	Possible concrete and visual representation	Teacher Modelling/Children's Recording	Fluency
<p><b>Year 5</b></p> <p>Identify factors, including finding all factor pairs of a number, and common factors of two numbers</p> <p>Practise and extend the formal written method of short division: numbers up to four-digits by a one-digit number</p> <p>Interpret non-integer answers to division by expressing results in different ways according to the context, including with remainders, as fractions, as decimals or by rounding as appropriate for the context</p> <p>Use multiplication and division as inverses</p> <p>Solve problems involving division including scaling down</p> <p>Divide whole numbers and those involving decimals by 10, 100 &amp; 1000</p>	<p><i>Cuisenaire to represent scaling</i></p>  <p><i>flexible arrays</i></p>  <p><math>4.8 \div 4</math></p>   <p><i>bar models</i></p>	<p><i>Children might use manipulatives alongside algorithms</i></p> <p>without remainder</p> $560 \div 4 = 140$ <p>remainder as a decimal</p> $564 \div 5 = 112.8$ <p>remainder as a fraction</p> $564 \div 5 = 112 \frac{2}{5}$ <p><b>long division</b></p> $560 \div 24 = 23 \text{ r } 8$ <p>remainder as a whole number</p> $560 \div 24 = 23 \frac{8}{24} \left( \frac{1}{3} \right)$ <p>remainder as a fraction in its lowest form</p> <p>remainder as a decimal</p> $560.0 \div 24 = 23.3$	<p>Count backwards in steps of powers of 10 for any given number up to 1 000 000</p> <p>Count backwards with positive/negative whole numbers through zero</p> <p>Practise mental calculation with increasingly large numbers</p> <p>Apply all multiplication tables and related division facts frequently, commit them to memory and use them to confidently to make larger calculations</p>
<p><b>Year 6</b></p> <p>Divide numbers up to 4-digits by a 2-digit whole number using formal written methods of long division, interpret remainders as whole numbers, fractions or by rounding, as appropriate for the context</p> <p>Divide numbers with up to 2 decimal places by 1-digit and 2-digit whole numbers, initially in practical contexts involving money and measures</p> <p>Understand the relationship between unit fractions and division</p> <p>Recognise division calculations as the inverse of multiplication</p> <p>Solve problems involving division</p>	<p><i>bar models</i></p> 	<p>remainder as a whole number</p> $560 \div 24 = 23 \text{ r } 8$ <p>remainder as a fraction in its lowest form</p> $560 \div 24 = 23 \frac{8}{24} \left( \frac{1}{3} \right)$ <p>remainder as a decimal</p> $560.0 \div 24 = 23.3$	<p>Practise division for larger numbers, using the formal written methods of short and long division</p> <p>Continue to use all multiplication tables and division facts to maintain fluency</p> <p>Perform mental calculations, including with mixed operations and larger numbers</p>
